Test supply chain dependency and recovery

Fictional case data and worked reasoning

The manufacturer of networked measuring instruments receives from a special provider the provision of verified updates. Two service providers named as replacements depend on the same operator of the update access after confirmed supplier analysis. The controlled restart without this affected access takes 18 hours. A regulated customer expects according to its established internal specification at most eight hours. In case the technical function of the available main path is previously confirmed.

Test point Purpose or comparison Observation Decision		
Main Way Ordinary Update Test Passed Technical Statement on the Main Way		
Replacement Providers Indeed Independent Resumption	Shared access evidenced	Independence open
Restart Maximum 8 hours in the sample	18 hours observed 10 hours deviation	

Expected result

A comprehensible decision on the replacement route and evidence of each role involved.

Apparently separate providers are checking for their actual dependencies.

Evidence of effect and resumption on the basis of equal conditions

Secure procurement decision, open action and shared evidence.

Counter-test and next decision

In the pattern, submit a third contract that uses the same update access. The number of contractual partners increases. The independent resumption to be proved remains open.

Test supply chain dependency and recovery

For your observation, specify a findable document.

Compare proven dependence and real observed recovery with the confirmed scale.

Verification identification, legal entity and date of processing and responsible body

Product, provider, performance and function concerned

Confirmed dependence and actual responsible person

Alternative route, intended environment and time scale

Observed result for resumption and original receipt

Decision and legal reference per undertaking

Test supply chain dependency and recovery

Refer remedial and post-test to the original test order.

Findings and supporting evidence

Remedy for non-independent or ineffective replacement

Tested follow-up test with date, observation and version documentation

Rehearsal and confirmed decision

Release by and on the open order and date
